Abstract

In view of global warming and air pollution problems, engineers should work closely together with Architects, Structural Engineers, Building Contractors, and other specialists, to design and build “green” buildings that integrate with renewable energy systems, including wind turbines, solar photovoltaic panels, as well as solar heating and cooling systems.

In this talk, Mr Louis MT Ching would like to share his experience for presenting some of the buildings and projects in Hong Kong, Shanghai, Beijing, and some overseas projects that have been integrated with renewable energy systems. Also, Mr. Ching would like to share, and explain which type of renewable energy systems are suitable for the application in Hong Kong, as well as highlighting some of the design criteria for considering renewable energy systems to be integrated with the buildings to achieve favorable result.

Priority will be given to ICES and HKIE members, thereafter place will be allocated on the “first come, first served” basis. Please register on-line via seminars@hkie-ymc.org. Please specify whether you are ICES member in the e-mail. The number of participants is limited to 80. For enquiries, please contact Mr. Simon Leung (Tel: 9191 8441).

Disclaimer: The Institution of Civil Engineering Surveyors has not arranged any insurance coverage for any participants on any personal accident, property loss/damage or virus infection arising from this CPD function. Participants should make their own insurance arrangement at their expenses.
